Office Action Summary

Application No.

10/516,866

Applicant(s)

WITZEL ET AL.

Examiner

Kwasi Karikari

Art Unit

2617

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 November 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

In response to applicant's argument that the Ejzak's reference fails to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., "determining...incoming request", see applicant's remarks/arguments pages 9 of 11) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

For further clarification, Ejzak's reference discusses a system that provides service to a User Equipment, via a circuit- switch MCS that uses call control protocol or via a IP Multimedia Subsystem that uses Session Initiation Protocol; and the determination whether UE is process as MSC or iMSC (see Pars. 0003-4, 0013 and 0094-98).

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 2617

Claims 1 and 19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The amended claimed limitations "identifying the protocol associated with the communications service request", in claims 1 and 20 are not clearly described in the specification as originally filed and these constitute new matter. For examination purposes, the examiner will treat the rejected claimed language in light of the specification. All claims that depend on the above rejected claims are also rejected for fully incorporating the deficiencies of the above rejected claims from which they depend. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-17,19 and 20 are rejected under U.S.C. 102(e) as being anticipated by Ejzak (20030027569 A1), (hereinafter Ejzak).

Regarding **claim 1**, Method for operating a switching node (iMSC in 151 interworking with 141, Pars. [0029 and 0046-47] and Fig. 1) of a communications network comprising the steps of:

receiving a communication service request; processing the requested communications service;(UE 111 initiates mobile call, see Fig. 5 steps 501 and 502);

determining an operation mode of the switching node by identifying the protocol associated with the communications service request wherein the determined operation mode indicates whether the switching node is operative for the processing of the requested communication service part of a layered architectural environment (see Par. [0046]) providing a user plane layer for user data and a control plane layer for signaling data (determination for the system to serve as traditional MSC or iMSC server, see Par. [0012, 0095-96] and Fig. 4, steps 403 and 404) , or

part of a non-layered architectural environment not providing a split between a user plane and a control plane (serving system acts as iMSC or MSC server, see Par. [0021, 0094, 0101] and Fig. 4, step 408), and wherein the processing of the requested communications service comprises the operating of the switching node in the determined operation mode (see Pars. [0013, 0052-54 and 0079]) .

Art Unit: 2617

Regarding **claim 2**, as recited in claim 1, Ejzak discloses the method, wherein the communications service request is a call set-up request (see Pars. [0104-07]).

Regarding **claim 3**, as recited in claim 1, Ejzak discloses the method, wherein the operation mode is determined according to at least one predetermined rule, which is set-up according to available network capabilities (SIP for IMS internet-like functionality and services, see Pars. [0020-21 and 0028], whereby the protocol is associated with "predetermined rule").

Regarding **claim 4**, as recited in claim 1, Ejzak discloses the method, wherein a plurality of incoming routes (signaling link and signaling and data links) from an access network (RAN 121) to the switching node are provided, at least one predetermined rule comprises an assignment of a dedicated incoming route (signaling link) to an operation mode of the switching node, and wherein the step of determining the operation mode comprises a determination of an incoming route of the communication service request and a comparison of the determined incoming route against at least one predetermined rule (see Par. [0034-35]).

Regarding **claim 5**, as recited in claim 1, Ejzak discloses the method, wherein at least one predetermined rule comprises an assignment of a dedicated access technology to an operation mode, said dedicated access technology provided by an access network for serving a subscriber terminal (UE 111) of a communication system comprising the

switching node, and wherein the step of determining the operation mode comprises the determination of the access technology used by the subscriber terminal and comparison of the determined access technology against at least one predetermined rule (communication system; 3G CDMA , see Pars. [0020 and 0024]).

Regarding **claim 6**, as recited in claim 1, Ejzak discloses the method, wherein the communication service request comprises an identifier of a communications service terminating party, at least one predetermined rule comprises an assignment of the identifier to a dedicated operation mode, and wherein the step of determining the operation mode comprises a determination of the identifier and a comparison of the determined identifier against at least one predetermined rule (SIP signaling between two 3GPP UE 111, see Par. [0080], whereby the 3GPP is associated with the "identifier ").

Regarding **claim 7**, as recited in claim 1, Ejzak discloses the method, wherein at least one predetermined rule indicates by means of a statistical distribution factor a distribution, for how many received communications service requests the switching node shall operate as a switching node of the layered architectural environment or as a switching node of the non-layered architectural environment, and wherein the determined operation mode depends on the statistical distribution factor (see Pars. [0038, 0052 and 0055]).

Art Unit: 2617

Regarding **claim 8**, as recited in claim 1, Ejzak discloses the method, wherein the determination of the operation mode comprises a determination of a current load level of the switching node in at least one operation mode, and wherein the determined operation mode for the processing of the requested communications service depends on the determined load level (see Par. [0037]).

Regarding **claim 9**, as recited in claim 1, Ejzak discloses the method, wherein the communication service request requests a subscriber terminal terminating communications service, wherein at least one predetermined rule comprises an assignment of an access technology available to the subscriber terminal to a dedicated operation mode, and wherein the step of determining the operation mode comprises the determination of the access technology available to the terminating subscriber terminal, and the determined operation mode depends on the determined access technology (see Pars. [CDMA and 3GPP, see [0020 and 0080]).

Regarding **claim 10**, as recited in claim 1, Ejzak discloses the method, wherein the switching node processes the requested communications service as a MSC/VLR, if the determined operation mode indicates that the switching node is part of the non-layered architectural environment (see Par. [0012-13 and 0095-96]).

Regarding **claim 11**, as recited in claim 1, Ejzak discloses the method, wherein the switching node processes the requested communications service as a MSC-server, if

the determined operation mode indicates that the switching node is part of the layered architectural environment (iMSC server, see Pars. [0095-97] and Fig. 4, step 408).

Regarding **claim 12**, as recited in claim 1, Ejzak discloses the method, wherein the determination of the operation mode comprises a determination of at least one of a group of an origin of the communications service request and a destination of the communications service request, and wherein the determined operation mode depends on the at least one determined member of the group (see Pars. [0089-91]).

Regarding **claim 13**, as recited in claim 1, Ejzak discloses the method, wherein the switching node is determined operatively to process the requested communication service as part of the non-layered architectural environment, if an origin of the communications service request, in particular an originating radio network node, is local to the switching node, and a destination indicated by the communications service request is local to the switching node (see Pars. 0089-91 and 0103).

Regarding **claim 14**, as recited in claim 1, Ejzak discloses the method, wherein the switching node is determined operatively to process the requested communication service as part of the layered architectural environment, if an origin of the communications service request, in particular an originating radio network node, is remote to the switching node, and a destination indicated by the communications service request is remote to the switching node (see Pars. 0089-91 and 0103).

Regarding **claim 15**, as recited in claim 14, Ejzak discloses the method, wherein the switching node applies local switching, if an origin of the communications service request, in particular an originating radio network node, is local to the destination indicated by the communications service request (see Par. [0081]).

Regarding **claim 16**, as recited in claim 1, Ejzak discloses the method, wherein the switching node is determined operatively to process the requested communication service as part of the layered architectural environment, if an origin of the communications service request, in particular an originating radio network node, is remote to the switching node, and a destination indicated by the communications service request is local to the switching node (service base on location, see Par. [0081]).

Regarding **claim 17**, as recited in claim 1, Ejzak discloses the method, wherein the switching node is determined operatively to process the requested communication service as part of the layered architectural environment, if an origin of the communications service request, in particular an originating radio network node, is local to the switching node, and a destination indicated by the communications service request is remote to the switching node (see Par. [0079-81]).

Art Unit: 2617

Regarding **claim 19**, Ejzak discloses a network node, in particular a combined MSC/VLR (tradition MSC) and MSC-server (MSC server or iMSC server) (see Par. [0012-13] and Fig. 1, comprising:

- an access network interface for the user plane (interface between 111 and RAN 121, see Fig. 1)

- an access network interface for the control plane (see Pars. [0025 and 0030]),

- a core network interface for the user plane (see Pars. [0030-32]),

- a core network interface for the control plane, a media gateway interface (see Pars. [0030, 0036 and 0047-48]),

- a media gateway operation unit connected to the user plane interfaces adapted to provide media gateway functions (see Pars. [0025 and 0030 and 0036]),

- a MSC-server operation unit connected to the control plane interfaces and to the media gateway interface, the MSC-server operation unit adapted to provide Msc-server functionality (MSC server 152, and iMSC 201),

- a selection unit adapted to determine for a communication service request (call set up, see Figs. 4 and 5), an operation mode for a processing of the requested communication service by identifying the protocol associated with the communications service request, wherein the determined operation mode indicates whether the network node is operatively for the processing of the requested communication service part of a layered architectural environment providing a user plane layer for user data and a control plane layer for signaling data (determination for the system to serve as traditional MSC or iMSC server, see Par. [0012, 0095-96] and Fig. 4, steps 403 and

Art Unit: 2617

404), or operatively part of a non-layered architectural environment not providing a split between a user plane and a control plane and a processor connected to the interfaces and units of the switching node, said processor being adapted to process a requested communications service in accordance with a determined operation mode of the network node (see Par. [0096-0100] and Fig. 4, steps 408 and 420).

Regarding **claim 20**, as recited in claim 19, Ejzak discloses the node comprising means for storing (HSS 142), in particular a lookup table, network node identifiers and related indications, indicating whether the identified network nodes are local or remote to the network node (see Pars. [0048-52]).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kauhanen (U.S. 20030157935) teaches an intersystem handover with modified parameter.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2617

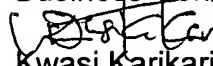

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

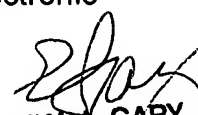

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kwasi Karikari whose telephone number is 571-272-8566. The examiner can normally be reached on M-F (8 am - 4pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Feild can be reached on 571-272-4090. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8566.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
